

TECHNICAL DIAGRAM ANOMALY & SELF-HEALING REPORT

Generated by Error-Aware VQA & Self-Healing AI Platform | Final Year B.Tech Project

Diagram Type:	Flowchart	Processing Time:	0.09 s
Detected Symbols:	4	Detected Text Segments:	4
Validation Status:	ANOMALIES DETECTED	Total Errors Found:	5

1. Detected Symbol & OCR Extraction Matrix

Node ID	Shape Symbol	Extracted Label / Text	Confidence
node_1	Input/Output	READ Number X	93.0%
node_2	Decision	Is X > 10 ?	94.0%
node_3	Input/Output	READ Number X	93.0%
node_4	Start/End	Label node_4	94.0%

2. Anomaly Reasoning & Self-Healing Log

ID	Anomaly Code	Severity	Reasoning & Suggested Repair
ANOM_001	ERR_MISSING_START	CRITICAL	Reason: Graph traversal cannot establish a deterministic entry point because no oval START symbol exists. Repair: Inject a START node at top center [X: 50%, Y: 5%] and draw directed edge to first process block.
ANOM_002	ERR_MISSING_END	CRITICAL	Reason: No terminal END symbol found in the control flow graph, allowing infinite execution state. Repair: Inject an END node at bottom center and connect dangling terminal branches.
ANOM_003	ERR_DEAD_END	HIGH	Reason: Node [node_1] reaches a non-terminal state without any outgoing directed transition. Repair: Connect node [node_1] to the primary flow stream or terminal END block.
ANOM_004	ERR_UNREACHABLE	HIGH	Reason: Node [node_4] is isolated from the main graph topology with zero incoming edges. Repair: Establish incoming arrow from preceding decision or process node to [node_4].
ANOM_005	ERR_DECISION_BRANCH	HIGH	Reason: Decision block [node_2] evaluates a conditional expression but only provides 1 outgoing path. Repair: Add explicit second outgoing edge with 'NO' condition label to alternate handler.
